

COMBINE INPUT LAYERS

The Combine Features option on the Feature Tools menu allows you to combine separate layers into a single feature layer. Use this tool when you have split out classes from a multi-class extraction pass.

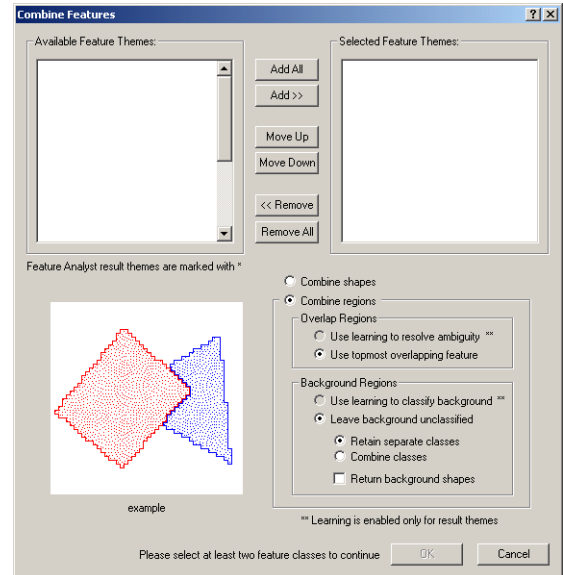

- 1 Highlight the layers to combine in the Table of Contents.
- 2 Select **Combine Features** on the Feature Tools menu.

The Combine Features dialog box opens. The selected layer appears in the Selected Feature Themes scroll box. If you missed a layer, you can select it in the Available Feature Themes scroll box and choose Add to place the theme in the Selected box.

- 3 Choose **OK**.

The Save Feature As dialog box opens.

- 4 Enter a **name and path** for the new layer.

The new multi-class layer appears in the Table of Contents.
